

Subprocess Class Reference

#include <[subprocess.h](#)>

Public Member Functions

Subprocess (std::string command, std::string path="", bool async=false)

Constructor for creating a process. [More...](#)

int **WaitForProcess** ()

Function to wait for running child process to complete its execution.

Detailed Description

Subprocess library class

Constructor & Destructor Documentation

◆ **Subprocess()**

```
Subprocess::Subprocess ( std::string command,  
                        std::string path = " ",  
                        bool      async = false  
                      )
```

Constructor for creating a process.

Parameters

- cmd** a string command given to a process
- arguments** a string array
- async** a boolean value for asynchronous operation (default=False)
